

**THE LATEST  
DEVELOPMENT  
FOR TARGETED  
OPERATIONS.**

**THIS WAY!**

**The All-New  
Sandvik Alpha 330**

# THE ALPHA 330 GOES FROM STRENGTH TO STRENGTH

Today's rock drills generate almost unlimited impact power. We need to control that power and, most importantly, ensure that it is transmitted into the rock as efficiently, accurately and economically possible. That is the job of the rock drilling tools, which is why we continue to develop the Alpha 330 tool system – to bring the best solution for performance and productivity.

The drill string rod/bit connection features an entirely new thread design and the rod itself is of the well-proven Hex 35 section, with a T38 thread at the shank end.

.....  
"To match the increased energy output from modern high-power rock drills in drifting and bolting, Sandvik brings further developments to the Alpha 330 – delivering more-accurately collared, straighter holes, higher penetration rates and 30 to 80 per cent more rod life."  
.....

The new short thread design on the hexagonal rods in the tool system result in a rigid, integrated powerpack drill string with superior resistance to bending stresses, improved bit guidance and perfect energy transfer. The sturdy thread is well guided inside the bit skirt, offering high precision in collaring – even in complex rock formations and against uneven surfaces.

## REVOLUTIONARY SHORTER THREAD KEY FOR GREATER STRESS REDUCTION

**A snug interface at this crucial point at the rear of the connection greatly improves the rigidity of the joint. The bit skirt covers the thread completely in the Alpha 330 connection, no part of the thread itself is exposed to sandblasting, reducing the risk of corrosion-fatigue.**

*To match the increased energy output from modern high-power rock drills in drifting and bolting, the new Alpha 330 has been designed and dimensionally optimized to replace R32 connections (also a Sandvik innovation) which has been the dominant Ø 45 mm system today.*

Using advanced **FEM programs** we are able to simulate the application of our designs long before the solution touches the rock.

Advanced analysis have been used to simulate and locate critical bending stresses of various designs to arrive at an optimally dimensioned rod / bit connection.

## NEW DESIGN FOR LOWER COSTS PER DRILLMETER

**Thread length and diameter means more steel and at least 30% better service life when compared to R32.**

**More steel for higher fatigue strength makes the connection rigid compared to the R32, to give exact collaring and straighter holes.**

# WHAT THE ALPHA 330 SYSTEM USERS ARE SAYING

After using the **Sandvik Alpha 330 tool system**, customers in mining and construction applications all over the world have identified the following advantages:

- ▶ Extended rod life, at least 30%
- ▶ Longer shank adapter life
- ▶ Longer coupling life

Combined, these features **reduce total drilling tool cost by 20%**. And, on top of that:

- ▶ High penetration rate
- ▶ Advanced precision in collaring
- ▶ Superior drilling accuracy
- ▶ Faster and easier uncoupling of bits
- ▶ Reduced machine downtime

# THE ALPHA 330 KEEPS YOU AT THE TOP OF THE GAME

- 1.** New Short thread design and hexagonal rods result in a rigid, integrated drill string optimized for 43 to 51 mm drilling.
- 2.** The new short thread design offers increased precision in collaring.
- 3.** The rigid drill string results in straighter holes, permitting optimum drilling patterns, better hole accuracy and higher rates of advance.
- 4.** Exact collaring and straighter holes are prerequisites for productive drilling with less over break and lower overall costs.
- 5.** Less downtime of machinery resulting in better scheduling through optimal productivity.
